

Mitchell Thompson *Web & Mobile Developer*

I have experience building small business sites, rich dynamic web apps, and versatile native mobile apps. I'm adept at designing, developing, and launching websites that incorporate modern styling implementations like responsive and adaptive design. I've worked on projects designing and developing Java based Android apps. I've worked with clients constructing websites from scratch, and I have built custom templates for use on Content Management Systems. My skill-set is varied, and I'm always eager to try new methods and technologies to build things that are functional and beautiful.
